SIMPLIFYING REGULATORY REPORTING.

There's a digital revolution afoot in regulatory reporting, and companies are having to contend with the ever-increasing complexity of submission formats demanded by regulators. Interactive, computer-readable formats such as XBRL, iXBRL and XML are becoming ubiquitous, to facilitate the automatic exchange of information between regulated entities, their regulators and other interested parties.

If your company is like most, you'll have invested heavily in your finance, reporting and analytical systems, only to find these typically lack the capability to export to any of these new submission formats. Faced with these shortcomings, you may have turned to multiple single-purpose tools or deployed expensive end-to-end solutions to run in parallel with your legacy systems.

We're confident that compliance with these new and more sophisticated data format requirements need not involve a departure from common-sense business practices and processes.

Authority Suite

The Authority Suite is your answer to the challenges of reporting using these new complex submission formats.

It respects the time and investment committed to your existing systems and infrastructure, and provides unmet technical capability with minimal disruption, avoiding the need for wholesale system change or the purchase of multiple niche software solutions.

THE SUITE INCLUDES:

REPORT Authority

Report Authority is a report authoring environment that combines numerical information with textual commentary into free-flowing documents such as financial statements, board reports and other internal and external reports.

Content can be linked to external data sources such as Microsoft Excel, Oracle HFM and Essbase, automated using calculations, validated using rules, and reports can be exported into popular formats including Word, PDF, XBRL or iXBRL.

DPM Authority

DPM Authority produces XBRL instance documents based on taxonomies built using the Data Point Model methodology pioneered by the European Banking Association (EBA) and European Insurance and Occupational Pensions Authority (EIOPA).

Covering CRD IV (COREP, FINREP etc.), Solvency II and other national reporting, DPM Authority provides a single, intuitive tool to fulfil all DPM reporting requirements.

XML Authority

XML Authority produces reports in XML format as needed for FATCA, CRS, SAF-T, Country by Country, AnaCredit, AEOI, AIFMD, MiFID II and many others.

Schemas from the schema library (or user imported schemas) are displayed in an approachable, non-technical way, and elements can be linked to external data sources such as Excel or relational databases.

TRY THE AUTHORITY SUITE FREE FOR 30 DAYS.

To discover first-hand how the Authority Suite can help you meet your reporting obligations with ease, contact us to arrange a demonstration.
